The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 9, 10, 14 and 15 are rejected under 35 U.S.C. 102) as being anticipated by Wood or Inoue.

Each reference teaches a stack of piezoelectric elements with alternate internal electrodes connected by external lead electrodes. It is noted that phrases relating to pre-assembled relationships or methods of forming are not germane to the patentability of the final product. Thus these phrases are not limiting in defining the final structure claimed.

Claims 12 and 13 are rejected under 35 U.S.C. 102() as being anticipated by Inoue.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 11 rejected under 35 U.S.C. 103(a) as being unpatentable over Wood or Inoue.

The references teach the claimed actuator except the external electrodes are not made of screen or net. However, selection from among known suitable materials has long been held to be within the skill expected of the routinier. Thus to select wire screen or mesh (known per se) as the external electrode material would have been obvious to one of ordinary skill in the art.

Applicants traversal of the restriction requirement is noted. However, the two groups of claims do not contain a same special technical feature as required by PCT Rules to disallow restriction. Thus for this reason the restriction is proper and is hereby made final.
